**7<sup>th</sup> - 13<sup>th</sup> November 2009**

**Yokohama, JAPAN**

## PRESENTATION

We are most proud to inform you that our association will host the International Thermalism/Scientific Congress concurrent with the FEMTEC General Assembly as major events commemorating our 80<sup>th</sup> anniversary.

As the conference is also opened to non-FEMTEC-Member countries, we would like to invite the participation of many interested organizations and individuals as possible.

The place of the congress is the port Yokohama where Japan opened to the foreign countries in the 19<sup>th</sup> century after the long seclusion which endured more than 200 years. Yokohama city celebrates the 150<sup>th</sup> anniversary of opening of its port.

Since times of old and in many parts of the world, hot springs have played an important role in the treatment of diseases and various ailments. In Europe, especially, the relation between medical care and the use of spas has been so conspicuous that research results in this field are increasingly being applied even in the field of beauty care today. Turning to Japan, its abundance of hot-spring resources has given rise to numerous hot-spring resorts throughout the country which are thriving as centres of recreation and tourism as well as therapy. Research on hot springs in the past was devoted mainly to aspects of natural science, such as medicine, pharmacology and earth science. Today, however, we see a progressive shift in academic pursuits to include the social sciences such as economics, law and tourism as well as the humanities which include folklore, literature and history. Given that global warming is becoming an issue of serious concern for all of us who inhabit the Earth, effective use of the formerly discarded waste water of spas is coming to the fore as an alternative source of thermal energy that could help reduce the consumption of fossil fuels.

With the above in mind, the fact that Japan is hosting such a significant international congress on thermal spas and their utilization is bound to provide significant momentum for those industrial sectors concerned with the environment, health, tourism, and related activities. Not only may they benefit in terms of business revitalization, but they will also be able to avail themselves of highly advanced technologies and theories resulting from wide-ranging studies and practices pursued in various countries and regions around the world.

The foremost aim of the congress in Japan is to provide a venue where front-line researchers, both academic and industrial, as well as business executives from around the world can exchange views and information with each other through presentations and via discussions that encompass academic studies and technological developments. This interactive approach is sure to deepen relationships between those on the research side and those on the business side, thereby contributing to the furthering of technology exchanges. At the same time, the participation of international researchers from a broad spectrum of academia and industry will also allow us to present a comprehensive overview of what is transpiring in the diverse thermal spa-related arena.

In addition to hosting the General Assembly of the internationally respected FEMTEC, we are pleased to host the International Scientific Congress concurrent with forums on the new and innovative utilization of hot springs which will also include participants from non-FEMTEC-member countries and regions as well. This, we believe, will result in far-reaching international benefit. It will allow us here in Japan to not only revitalize our own hot spring analysis and research but to disseminate worldwide our achievements as well as to enhance an appreciation of Japan's unique "onsen" or hot-spring culture.

Mr. Tagao Taki, *President Japan Spa Association*

Prof. Umberto Solimene  
*General Secretary FEMTEC*

Prof. Nikolai Storozhenko  
*Chairman FEMTEC*

## CONGRESS PROGRAM

### Saturday 7 November:

Departure from Milan (Malpensa) at 19.30

### Sunday 8 November:

Registration and welcome party – in Yokohama

### Monday 9 November:

Opening ceremony, presentation on the current state of thermalism by participating countries, poster session, dinner party – in Yokohama

### Tuesday 10 November:

Scientific presentations, poster session – in Yokohama, Tour to Hakone and farewell party – in Hakone

### Wednesday 11 November:

Morning: FEMTEC General Assembly, awards and commendation ceremony – in Hakone

Afternoon: Inspection tour of Hakone hot-spring resort – in Hakone

Departure of the participants, or Excursion (optional): Visit to Kusatsu hot-spring resort

### Thursday 12 November:

Free time in Tokyo (Hotel Alasaka)

### Friday 13 November:

Departure from Narita Airport

<b>SCIENTIFIC TOPICS</b>
<ul style="list-style-type: none"> <li>- Thermalism, Spa and Traditional Medicine.</li> <li>- Research and clinica in the thermalism.</li> <li>- Economical and social aspects.</li> </ul>
<b>FEMTEC awards for Spa poster and oral presentation.</b>

## CULTURAL PROGRAM (not included in the package)

### Thursday 12 November:
